

Script 1: 3 minutes, 3 clips

Tentpole · Explainer

2:55

FORMAT	Founder to camera, B-roll inserts, text overlays
ASPECT	9:16 vertical (Reels/Shorts/TikTok) or 1:1 if posting to LinkedIn
PACING	150 wpm, jump cut every 2-3 sentences, pause for B-roll rolls

[HOOK — 0:00-0:07] *To camera, slight lean in, fast delivery.* What if I told you... you could paste a YouTube link right now — and three minutes from now have three short-form clips that actually go viral? *[TEXT OVERLAY: "paste → 3 clips → 3 min"]*

[PROBLEM — 0:07-0:25] *To camera, slower, more serious.* Every creator I know has the same problem. You spend six hours on a video. You post it. You get two hundred views. Meanwhile — the agency down the street charges you fifteen hundred dollars to repurpose it... and the clips still feel generic. AI slop. *[B-ROLL: scrolling TikTok showing bad auto-clips, mock invoice "\$1,500 — 7 days"]*

[REVEAL — 0:25-0:40] *To camera, smile, energy up.* We built RelatiV because we got sick of that trade-off. Paste a URL. Three minutes later, three taste-selected clips. Not auto-clips. Taste-selected. *[B-ROLL: typing a URL into relativclips.com, three clips dropping]*

[HOW IT WORKS — 0:40-1:30] *To camera, then cut to screen recording of the dashboard.* Here's what happens under the hood. Six stages. First — we transcribe every word. Then — we look for the moments where your voice gets loud. The peaks where energy spikes. We track who's on camera, and when. We detect scene changes. We score the hook strength of every single moment using a frontier AI model. The ones that make someone stop scrolling? Those become your clips. Rendered vertical. Captioned. Ready to post. *[B-ROLL: dashboard with stages lighting up — Transcribe → Score → Detect → Render]*

[OUTPUT — 1:30-1:50] *To camera, holding phone showing the result.* The result: three short-form videos, optimized for TikTok, Reels, and Shorts. Each one has a hook, a payoff, a reason to share. You're not getting a software demo. You're getting content that performs.

[FUTURE — 1:50-2:35] *To camera, voice forward, vision-arc.* And this is just v1. Here's what's coming. **Brand voice training** — your clips sound like you, not a robot. **A clipper marketplace** — humans in the loop for the moments that need a real touch. **Multi-region rendering** — so we can run on content from anywhere in the world. And **cross-platform optimization** — one URL, ten platforms, perfectly formatted. The next twelve months are going to be wild. *[B-ROLL: text overlays, "v1 → v2" timeline, "coming soon" cards]*

[CTA — 2:35-2:55] *To camera, direct, hold eye contact.* We're opening one hundred early-access spots this week. Paste a link. See what comes back. If it doesn't beat your last three clips, tell us why. We're building this in public — and we want your input. Link in bio. *[TEXT OVERLAY: "relativclips.com · 100 spots · this week"]*
